

PROGRAM

Care: Healthcare Reform

The Health Professionals Australia Reform Association (HPARA) is providing leadership to the community by gathering experts to scope the problems experienced by health professionals that come from the false-claim input of fellow professionals and administrators. We aim to enable the consumer to be “heard”, while expecting that all participants in the healthcare journey are held accountable, and that the processes for management of adverse events are inquisitorial not adversarial, noting that in-depth review of past performance and continuous quality improvement should be expected of all aspects of patient care and regulation, not just related to the performance of healthcare professionals.

The current adversarial approach to complaints fails to curtail poor practitioners in a timely fashion, inappropriately harms good healthcare professionals, imposes an unsustainable financial burden, limits justice to bone fide complainants, limits advances in healthcare, and probable costs the lives of patients and providers.

The Australian community deserves system.
